# COMMUNITY **INVOLVEMENT**

Daphne Utilities has partnered with many local and national organizations to build a better utility for our Eastern Shore community. Look for us at these annual events!

HELPING A NEIGHBOR IN DAPHNE

For spare change each month, you can assist a neighbor who may need a help-

ing hand. Daphne Utilities has partnered with Ecumenical Ministries to help people who are having a hard time in this tough economy. The Lend-a-Hand

program allows our customers to round up their utility bill to the next whole

dollar. Those extra pennies will be used to help others with their utility bills.

To participate, simply fill out the form on our website:

www.daphneutilities.com/customer-service/lend-a-hand

You may opt out of Lend-a-Hand at any time by contacting our Customer Service Department.

**IMMEDIATELY STOP** 

WHAT YOU ARE DOING.

**GO** TELL AN ADULT.

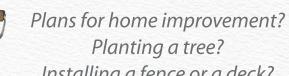

**GO** TO A SAFE PLACE.

# 251-626-2628

GO, GO, GO! GO OUTSIDE.

**NATURAL GAS** 

Think you smell gas?

Know what's **below.** 

Installing a fence or a deck?

**Call** before you dig.

Welcome!

Welcome to the 2020 Consumer Confidence Report (CCR) for Daphne Utilities. Once again, we are proud to present this annual report of our water quality to the residents of our Eastern Shore community.

For more than 60 years, Daphne Utilities has been serving this Daphne Community and surrounding areas on the Eastern Shore. We are committed to delivering an exceptional level of service while providing you with reliable, safe, and high-quality utility services. We are able to meet your needs and exceed your expectations only through the remarkable efforts of a dedicated team of employees and our passionate pursuit of excellence.

This CCR explains where your drinking water comes from, how it is treated and tested to ensure it is safe for you and your family, and the ongoing steps we take to protect our valuable natural resources. It provides information on water quality and the results of the hundreds of tests we perform every day of the year from sampling locations throughout our service area. These daily tests ensure your water is safe, clean, and healthy.

## Where Does Our Water Come From?

The source of our drinking water is a natural underground reservoir called the Miocene Aquifer that encompasses an area of about 6,500 square miles in southwest Alabama and western Florida. with an average daily withdrawal of approximately 3 million gallons of safe and clean drinking water.

This aquifer is recharged primarily through precipitation and discharge is primarily to streams, bays, sounds, and wells. At Daphne Utilities, we pump water from this aquifer through a series of twelve wells ranging in depth from 250-450 feet. We have the capacity to pump nearly 9 million gallons per day

### Source Water Assessment

In compliance with the Alabama Department of Environmental Management (ADEM), **Daphne Utilities** has developed a Source Water Assessment plan that will assist in protecting our water sources. This plan provides additional information such as potential sources of contamination. It includes a susceptibility analysis, which classifies potential contaminants as high, moderate, or non-susceptible to contaminating the water source. The assessment was performed, public notification was completed, and the plan was approved by ADEM. A copy of the report is available in our office for review during normal business hours.

Please help us make this effort worthwhile by protecting our source water. Carefully follow instructions on pesticides and herbicides you use for your lawn and garden, and properly dispose of household chemicals, paints and waste oil.

# Cease the Grease Program

Grease is the main cause of sewer back-ups and negatively impacts **our environment.** The oil recycling program involves placing recycle stations in convenient locations around the community. Customers can drop off containers of used grease and cooking oil and pick-up empty containers for future disposal free of charge. Daphne Utilities then converts it into clean-burning and environmentally-safe biodiesel fuel.

### Find a used oil recycling station near you!

For more information visit:

### Water Treatment Process

In our water treatment process, raw water is pumped from underground aguifers into an aeration chamber. Aerating the raw water adds Oxygen to it and helps eliminate certain naturally-occurring contaminants, such as Iron. After aeration, Fluoride is added to promote good dental health, Lime is added to adjust the pH of the water to an optimum level and a Disinfectant is added to keep the water safe in the water lines all the way to the customer's home. The water and additives are mixed thoroughly inside a Clearwell, a large tank that allows

mixing to be completed before entering the distribution system Once the treated water meets all quality standards, high service pumps are used to move the water into Storage Tanks and then through the distribution system to the Customer.

QUICK TIP FOR POOL OWNERS: Use a Pool Cover. Evaporation will be reduced by 50%!

YOU HAVE A VOICE.

Our board of directors meets once a month at Daphne City Hall. We welcome you to join in!

Our meetings are held on the last Wednesday of every month at 5:00 pm at 1705 Main Street, Daphne, AL 36526. You can also stop by our main office at 900 Daphne Avenue or call **251-626-2628**.

## Table of Detected Contaminants

This 2020 Consumer Confidence Report contains results from the most recent monitoring (testing performed January - December 2019) which was performed in accordance with the regulatory schedule. We have learned through our monitoring and testing that some constituents have been detected.

We are pleased to report that our drinking water meets or exceeds all federal and state requirements!

CONTAMINANTS	VIOLATION Y/N	LEVEL DETECTED		UNIT MSMT	MCLG	MCL	LIKELY SOURCE OF CONTAMINATION	
		LOW	HIGH					
Alpha emitters	NO (Avg. 3.3)	0.3	11.1	PCi/l	0	15	Erosion of natural deposits	
Combined radium 226 & 228	NO (Avg. 3.7)	0.7	3.1	PCi/l	0	5	Erosion of natural deposits

## Standard List of Drinking Water Contaminants

Daphne Utilities routinely monitors for contaminants in your drinking water according to Federal and State laws, using EPA-approved methods and a State-certified laboratory. ADEM allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. In these cases, the most recent sample data are included, along with the year in which the sample was taken. The following is a list of Primary Drinking Water Contaminants, Secondary Contaminants, and Unregulated Contaminants for which our water system routinely monitors. These contaminants were not detected in your drinking water unless they are listed in the Table of Detected Drinking Water Contaminants.

ONTAMINANT	MCL	UNIT OF MSMT		CONTAMINANT	MCL	UNIT (
ACTERIOLOGICAL CONTAN	MINANTS			ORGANIC CONTAMINANTS	CONT.)	
otal Coliform Bacteria	<5%	present/absent		trans-1,2-Dichloroethylene	100	ppb

AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus, monitoring for these contami-

Some people may be more vulnerable to contaminants in drinking water than the

general population. Immuno-compromised persons such as persons with cancer under

going chemotherapy, persons who have undergone organ transplants, people with HIV/

INFORMATION ABOUT LEAD: Elevated levels of lead can cause serious health problems especially for pregnant women, infants, and young children. However, lead is rarely found in source water. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

Use only water from the cold-water tap for drinking, cooking, and especially for making baby formula. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply, and hot water is more likely to cause lead t leach from plumbing materials. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water hotline or at www.epa.gov/safewater

result of oil and gas production and mining activities

**GENERAL INFORMATION** 

All drinking water, including bottled drinking water, may be reasonably expected to

contain at least small amounts of some contaminants. The presence of contaminants

does not necessarily indicate that water poses a health risk, MCL's, defined in a LIST OF

**DEFINITIONS** in this report, are set at very stringent levels. To understand the possible

health effects described for many regulated constituents, a person would have to drink

The sources of drinking water (both tap water and bottled water) include rivers, lakes,

streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land

or through the ground, it dissolves naturally occurring minerals and radioactive material,

ity. Contaminants that may be present in source water include:

and it can pick up substances resulting from the presence of animals or from human activ-

Microbial contaminants, such as viruses and bacteria, which may come

from sewage treatment plants, septic systems, agricultural livestock

Inorganic contaminants, such as salts and metals, which can be naturally-

wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides, which may come from a variety of sources

such as agriculture, storm water run-off, and residential uses.

occurring or result from urban storm water run-off, industrial or domestic

Organic chemical contaminants, including synthetic and volatile organic

chemicals, which are by-products of industrial processes and petroleum

production, and can also come from gas stations, urban storm water runoff,

Radioactive contaminants, which can be naturally occurring or be the

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit

the amount of certain contaminants in water provided by public water systems. Food and

Drug Administration (FDA) regulations establish limits for contaminants in bottled water.

of having the described health effect.

operations, and wildlife.

and septic systems.

2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance

Action Level (AL): The concentration of a contaminant that triggers treatment or other requirements which a water system must follow.

Coliform Absent (ca): Laboratory analysis indicates that the contaminant is not present

Disinfection byproducts (DBPs): Formed when disinfectants used in water treatment plants react with bromide and/or natural organic matter (i.e., decaying vegetation) present in the source water.

Initial Distribution System Evaluation (IDSE): A one-time study conducted by water systems to identify distribution system locations with high concentrations of trihalomethane (THMs) and haloacetic acids (HAAs).

Locational Running Annual Average (LRAA): Yearly average of all the DPB results at each specific sampling site in the distr bution system. The highest distribution site LRAA is reported in the Table of Detected Contaminants.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of disinfectant allowed in drinking wate There is convincing evidence that addition of a disinfec tant is necessary for control of microbial contaminant

Millirems per year (mrem/yr): Measure of radiation absorbed by the body.

Nephelometric Turbidity Unit (NTU): A measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Non-Detects (ND): Laboratory analysis indicates that the constituent is not present above detection limits of lab equipmen

PPO (parts per quadrillion): picograms per liter PPT (parts per trillion): nanograms per liter.

PPB (parts per billion): micrograms per liter (ug/l).

PPM (parts per million): milligrams per liter (mg/l).

pCi/L (picocuries per liter): a measure of radioactivity.

RAA: Running annual average

Standard Units (S.U.): pH of water measures the water's balances of acids and bases and is affected by temperature and carbon dioxide gas. Water with less than 6.5 could be acidic, soft, and corrosive. A ph greater than 8.5 could indicate that the water is hard

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drin

Variances & Exemptions (V&F): State or EPA permis sion not to meet an MCL or a treatment technique under certain conditions.
